b.) Amendment to the Claims

1. (Currently Amended) A display device comprising a surfaceprotective layer, an information display layer, a light-reflective resin sheet and a substrateadhesive layer, said display device being a number plate adhered to an auxiliary substrate
via a substrate adhesive layer, and substrate, said auxiliary substrate being mechanically
fixed on an installation substrate, said auxiliary substrate having a size larger than said
display device, said display device being installed on a front face of said auxiliary
substrate and said auxiliary substrate being capable of wrapping around the display device,

wherein a specular reflective layer is installed within overlapping said light-reflective resin sheet via a destructive layer, and the said specular reflective layer of the display device and said installation substrate are being adhered via the substrate-adhesive layer, such that (i) when said display device is peeled off from the installation substrate, separation takes place at the interface of the destructive layer and any one of the layers constituting the light-reflective resin sheet which is in contact with the destructive layer, and/or by destruction of the destructive layer, and (ii) the specular reflective layer remains on the installation substrate,

said destructive layer comprising cyclopentane resin according to formulae 1a, 1b or 1c, vinylcyclopentane resin according to formula 2a, vinylcyclopentanorbornene resin according to formula 2b, cyclohexadiene resin according to formula 3a, cyclohexane resin according to formula 3b or methacrylic acid ester resin according to formula 4:

$$\begin{array}{c|c} & & \\ \hline \\ R & R^3 \end{array}$$
 CH₂-CH₂ $\begin{array}{c} \\ \\ \end{array}$ (2a)

$$\begin{array}{c|c}
\hline
 & CH_2 CH_2 \\
\hline
 & R
\end{array}$$
(2b)

$$\begin{array}{c|c}
\hline
\end{array}$$
(3a)

$$\begin{array}{c|c}
 & CH_{3} \\
 & CH_{2} & O
\end{array}$$

$$\begin{array}{c|c}
 & CH_{3} \\
 & CH_{2} & O
\end{array}$$

$$\begin{array}{c|c}
 & CH_{3} & O$$

$$\begin{array}{c|c}
 & CH_{3} & O
\end{array}$$

$$\begin{array}{c|c}
 & CH_{3} & O
\end{array}$$

$$\begin{array}{c|c}
 & CH_{3} & O
\end{array}$$

$$\begin{array}{c|c}
 & CH_{3} & O$$

$$\begin{array}{c|c}
 & CH_{3} & O
\end{array}$$

$$\begin{array}{c|c}
 & CH_{3} & O$$

$$\begin{array}{c|c}
 & CH_{3} & O
\end{array}$$

in which R¹ is hydrogen atom or cyclohexyl; R² and R³ are independently hydrogen atom, methyl, cyano, methoxycarbonyl, ethoxycarbonyl, cyclohexyloxycarbonyl or n-butoxycarbonyl; and n stands for number-average degree of polymerization.

2. (Currently Amended) A display device as set forth in Claim 1, wherein the light-reflective resin sheet comprises is a retroreflective sheeting layer formed of micro comprising glass beads and a specular reflective layer is specular reflective layer

installed on at least a portion of a lower surface of the micro glass beads nearer said auxiliary substrate via said destructive layer and a focusing layer.

3. (Currently Amended) A display device as set forth in Claim 1, wherein the light-reflective resin sheet is a microprismatic retroreflective sheeting layer formed of microprisms and with a specular reflective layer being installed on the reflective side faces of the microprisms.

Claims 4-6 (Cancelled).

- 7. (Currently Amended) A display device as set forth in any one of claims 1-3, comprising an active or passive type RFID device equipped with a communication antenna installed on the back of the display device away a back of the display device, which is a side opposite from said surface protection layer.
- 8. (Currently Amended) A display device as set forth in Claim 7, wherein a portion zone of the specular reflective layer that which overlaps with a portion of the light reflective resin sheet on which the active or passive type RFID device equipped with a the communication antenna is installed, is removed.

9. (Currently Amended) A display device as set forth in Claim 8, wherein the specular reflective layer is installed within a portion of the light-reflective resin sheet forming said RFID device equipped with a to form said communication antenna, and when the display device is peeled off from the installation substrate, the specular reflective layer is broken and loses its antenna function.
